

Color Sliders

Write an application with three sliders horizontally placed at the bottom of a frame, and a display panel at the center of the frame. Each slider represents a value from 0 to 255 for the red, green, blue parts of a color. This number is shown beside the slide. When the user changes the values in the sliders, the background of the display panel is changed to the corresponding color. The output of your program should have the following layout:
